---

- Tamil
- English

## Key Project

---

### Konkan - ERP

**Role:** PHP Developer

**Tools:** Sublime Text

**Technologies:** CodeIgniter, jQuery, JavaScript, AJAX, Bootstrap, HTML, CSS

**Database:** MySQL

#### Project Summary:

- Developed a quarry-based **ERP system** to manage daily business operations.
- Implemented multiple modules: **Organization Setup, Customers, Vendors, Sales, Purchases, Inventory, Weighbridge, Security, Accounts, and Reports.**
- Integrated **role-based access control**, allowing customizable permissions for different user types (e.g., Super Admin, Admin).
- Built dynamic features in **Customer/Vendor modules** including **custom pricing** and **credit limits.**
- Integrated tax calculations (**GST, TCS, TDS**) into **Sales** and **Purchase** modules with automated **accounting log generation.**
- Developed key **accounting features: Profit & Loss, Balance Sheet, Chart of Accounts, and General Ledger.**
- Ensured responsive UI using **Bootstrap**, with robust backend logic in **CodeIgniter.**

### EventButiq

**Role:** PHP Developer

**URL:** <https://www.eventbutiq.com/> 

**Tools:** Sublime Text

**Technologies:** CodeIgniter, jQuery, JavaScript, AJAX, Bootstrap, HTML, CSS

**Database:** MySQL

#### Project Summary:

- Developed **EventButiq**, an online marketplace that connects customers with local event rental vendors.
- Built modules for **Orders, Products, Vendor Profiles, Banners, Customers, and Rewards** within a centralized **Admin Panel.**
- Implemented a **multi-vendor system** allowing vendors to register, upload products, and manage inventory.
- Enabled **vendor registration** via form submission or admin approval, with login functionality for product management.
- Designed a **reward system** where customers earn points on successful first orders, redeemable on future purchases.
- Integrated **PayPal** for online payments, requiring customers to pay **50% upfront** during the booking process.
- Ensured a responsive, user-friendly front-end using **Bootstrap**, and built backend logic with **CodeIgniter.**
