ROLE: SOFTWARE DEVELOPER.

### 5. CONFIG TECHNOLOGIES (P) LTD, CHENNAI - DEC 10 2010 TO DEC 2012

ROLE: SOFTWARE ENGINEER - DEVELOPER

## TECHNICAL SKILLS

<b>Languages</b>	SQL, HTML, PHP, Python (version 3.10.12)
<b>Operating Systems</b>	Windows XP, Windows 7, Windows 10, Windows 11, Linux, Ubuntu 20.04
<b>Framework</b>	MVC Framework, Zend, CodeIgniter, Flask
<b>Databases</b>	MySQL, PostgreSQL (version 16.3)
<b>Scripting</b>	JavaScript, jQuery, Ajax
<b>Tools</b>	GIT, Rapid7, Kibana, Visual Studio-Version 1.95.1

### Achievements

This company proudly presented best performer award for twotimes in recognition of an outstanding performance towards my work.

## Project 1

### EMACS

#### Project Description

A High Court abstract for an accident claim system project would likely focus on improving the efficiency and fairness of the compensation process for victims of motor vehicle accidents. This could involve streamlining claim procedures, ensuring timely compensation, and addressing issues like access to justice for vulnerable individuals, especially those who are poor or lack legal representation. The abstract might also highlight the need for better on-road safety measures and innovative solutions to expedite claim settlements

Speech To Text Conversion: The primary objective of this project is to develop a robust system capable of converting real-time speech into text without relying on internet connectivity. In contrast to traditional speech recognition systems that depend on cloud-based APIs, this offline solution ensures data privacy, low latency, and high availability, making it ideal for use in remote or secure environments. The system leverages efficient on-device speech recognition models and audio processing techniques to transcribe spoken words into accurate, readable text in real time. This project is particularly useful for applications such as voice note-taking, hands-free operation in embedded systems, and accessibility tools for the hearing impaired. By focusing on real-time performance and offline functionality, this project aims to provide a practical, secure, and efficient alternative to online speech-to-text services.

#### Role and Responsibilities

- Development using Php
- Backend database is MySQL
- Involved in bug Fixing

#### Technology

Php 8.2.4, Html, JavaScript, PostgreSQL, Ajax, Python 3.10.12, Whisper AI

## Project 2

### Ecommerce Portal

#### Project Description

The aim of this project is on the online shopping application it is developed using HTML5, PHP, CodeIgniter. The application is very useful where the buyer can directly buy the products from home via internet on mobile or system. The application reduces lot of work load for customer as well as owner. The transaction of money is completed in real time system. By this online shopping the product is directly delivered to customer home.

#### Roles and Responsibilities

- Involved in fixing the bugs.

#### Technology

PHP, Code igniter, MySQL

## Project 3

### Tomedes

#### Project Description

System is for translating all manner of documents. It provides translation by human translators and its go to great lengths to give you 24/7 support by a human project manager. And it provides phenomenal translations. It can provide translation for over 33 of the world's major languages, as well as many lesser spoken ones.

#### Roles and Responsibilities

- Design & Development of UI using HTML, JavaScript
- Frond end is Zend framework
- Backend database is MySQL
- Involved in fixing the bugs.

#### Technology

Zend, php, Java Script, MySQL, jQuery, Ajax, json and Windows 7.

## Project 4

### Online Registrar Information System (RIS) for an educational institute

#### Project Description

System is for registrar office and provides services to students like viewing their schedule, progress reports, future course planning, online course registration etc. Faculty can show willingness to teach certain courses, availability for future, daily schedule, can download class list, upload and edit student grades etc.

#### Roles and Responsibilities

- Design & Development of UI using HTML, JavaScript
- Backend database is MySQL
- Involved in fixing the bugs.

#### Technology

PHP,HTML, Java Script, MySQL and Windows 7, jQuery, Ajax.

**Project 5    Medical Report application for a Health Care Industry**

**Project Description:**

This project is to develop a software application for Hospital to organize their daily activities like Patient Information, patient report, billing, tablets information, stock details and more. In present trend this application is used in every Hospital. This system will save time and increase work efficiency.

**Roles and Responsibilities**

- Involved in design and coding of the modules.
- Backend used is MySQL

**Technology**

Dream weaver, PHP, MySQL, jQuery.

**Project 6    Online Stock Exchange application:**

A stock exchange is simply a market that is designed for the sale and purchase of securities of corporations and municipalities. A stock exchange sells and buys stocks, shares, and other such securities. In addition, the stock exchange sometimes buys and sells certificates representing commodities of trade.

Understanding what a stock exchange is and how an online stock exchange works, can help you make the right decisions when it comes to your investment. Being able to follow the NY stock exchange and being able to understand the NASDAQ stock exchange numbers that appear on your news every evening can help you become a better investor and can help you profit more from the stock market.

**Roles and Responsibilities**

- Involved in design and coding of the modules.
- Backend used is MySQL

**Technology**

Dream weaver, php, MySQL, Vb6.0

**Project 7    Dealers Management Information System (DMIS)**

**Project Description:**

DMIS application takes care of all the dealers and distributors activities of a company. Company is having many numbers of dealers and distributors. In order to closely monitor the activities of the company DMIS was utilized. Dealers also can know the stocks available and can place the orders. From company side, accounts of all dealers were maintained separately. And if a dealer places an order, DMIS will check the outstanding limits of the dealer and accepts the order. If he crosses the limit, it will display appropriate messages. It will also maintain age analysis of payments pending, debtor analysis etc. because of DMIS

capturing information and generating reports become very easy and at the same time its time saving.

#### **Roles and Responsibilities**

- Involved in design and coding of the modules.
- Backend used is MySQL.

#### **Technology**

PHP, MySQL, jQuery

#### **Personal Details**

Address:

Bhuvanewari.S
