PROJECTS

Aeedee

- The NFC card chip could be used to share the user's profile portal.
- Users may save information under the categories of business, profession, and personal.
- Users can establish groups, share announcements, and documents relevant to their professional and corporate needs.
- Users may "Post an add" for commercial purposes.

Health Passport

- Health Passport will serve as a personal health info notepad. It provides various sections under which a user's health data could be stored.
- The users can save their info about their Health, Lifestyle and Lab reports.
- According to the saved data, the user's health could be tracked and a notification can be sent.

Responsibilities

- I developed this project for both webapplication and mobile application.
- All these were developed single handedly.

Website:

- In website, application was developed using MEAN stack.
- Admin panel was developed for this application in website.

Mobile application:

- This project was also developed for mobile in Android & ios.
