Successfully led projects from requirement gathering to clean, secure code production, consistently exceeding client expectations.

Work History

Sr. Web Developer

Softaculous, Mumbai

Virtualizor

Worked on a product named "**VIRTUALIZOR**" a web-based VPS Control Panel enabling one-click deployment and management of VPS on servers.

- Developed and maintained intuitive **Admin Panel for Virtualizor** streamlining server management tasks for administrators.
- Designed and implemented robust VPS backup solution, integrating **REST APIs** for **Dropbox, Google Drive, OneDrive, and AWS S3** to enhance data security and reliability.
- Innovated **Backup migration** capabilities for seamless transfer of VPS backups across various cloud storage providers.
- Implemented **Dynamic pricing structures** based on backup usage, ensuring cost-effectiveness and profitability.
- Integrated **Virtualizor with WHMCS**, creating a seamless VPS management experience within this popular billing and provisioning platform.
- Developed and maintained **Blesta module for Virtualizor**, enabling users to manage VPS instances within Blesta's billing and support system.
- Developed and implemented a variety of **dynamic and interactive charts** (including pie, doughnut, bar, and more) using **ApexCharts.js** to deliver visually compelling and data-driven insights.
- **Designed and developed Virtualizor's End-User Panel** using **Tailwind CSS**, implementing both light and dark modes

PHP FullStack Web Developer

Raj Computers, Mumbai

- Planned, coded and deployed web-based applications using PHP, MySQL and JavaScript.
- Following are the projects in which I've contributed my part
- **EPIWEB** is a Exam Paper Inventory. It is similar to a **billing inventory with accounts**. Maintaining records of exam paper purchased by schools from MBSM (Maharashtra Bhartiya Shiksha Mandal). Generating dynamic reports and register are some of its key features.
- **FMI** is a Manufacturer Inventory Application. Worked on **Managing Stocks of Raw Material** and calculating quantities of Finished Products from Raw Material. Worked on Developing Transactions.
- **SIS** is a Stock Inventory System. Worked on **Managing Stocks based on Purchases & Sales**. Worked on creating Expense Module.
- **SPPL** is an Excavation Software for Shankar Parvati PVT. LTD. Worked on **Crusher system and repair maintenance system**. Notification for **EMI installment of vehicles**. Also worked on the **payroll**, which is managing the attendance and salary.
- Worked closely with project manager from planning stages to deployment to deliver on-target projects.
- Configured and deployed existing and future REST APIs, integrating with third-party APIs.
- Mentored junior developers on industry best practices & techniques.
